

## Gas Meters

# Isolated Steel Service

### Quick Facts

- Gas meter safety inspections
- You do not need to be home
- Your gas service will not be interrupted
- Part of PG&E's corrosion prevention work

---

### What is the work?

As part of PG&E's preventative maintenance work on gas service to your home, PG&E will be inspecting steel pipes that connect the gas meter to your neighborhood distribution system. The safety inspections will be completed at approximately 2,000 locations in the City of San Bruno.

---

### What to expect

At your home, a PG&E authorized contractor will conduct an inspection checking your gas meter for corrosion protection. If needed, the contractor may install a small anti-corrosion anode device on your gas service line. You will receive a notice if we install the anti-corrosion device. There will be no interruption of your gas service.

---

### Who will do the work?

Authorized PG&E contractors will be conducting the inspections. These individuals will be wearing PG&E contractor identification badges and appropriate safety gear. The San Bruno Police Department has a list of the authorized contractors with photo ID's and license plates. If you have concerns regarding the identification of the individual, please contact San Bruno Police at 650-616-7100.

---

### When will work happen?

Inspections will be conducted in October and November, 2012. Most work will occur Monday through Friday, 8:00 am to 5:00 pm. Some Saturday work will be scheduled by appointment.

---

### Do I need to be home?

Access to your gas meter is necessary, but you do not need to be home. If the contractor is unable to access your meter, a door hanger will be left so you can call to schedule a convenient time for the safety inspection.

---
